"The coupler volume, the throttle and the compensating chamber are filled with a hydraulic medium; the spring element is braced on the master piston; and the spring element acts on the flexible section via an intermediate ring" in claim 26;

"The spring element is braced on a flange which is connected to the slave piston in an immovable manner, and wherein the flange is situated in a region of an end of the slave piston facing away from the coupler volume" in claim 28; and

"The spring element acts via a sleeve ring; and the sleeve ring has the form of a disk in the radial extension and the form of a sleeve on the outside in the axial extension" in claim 29 that the prior art of record neither taught nor suggested.
